PROFESSIONAL SUMMARY

Senior full-stack engineer who architects and ships production platforms end-to-end. Sole architect of a real-time operational platform serving a 300+ person organization — cited as a top-4 strategic factor in company acquisition. Specializes in scalable AWS infrastructure, AI-powered tooling, and high-velocity React/TypeScript applications. Built for high-intensity, high-stakes environments with an emphasis on clean abstractions and long-term maintainability.

EXPERIENCE

Senior Software Engineer — OuterBox (formerly GRO Marketing, acquired Feb 2026) | Detroit, MI
February 2023 – Present

- Sole architect of a production platform supporting CRM, deal management, and contract automation for a 300+ person organization.
- Built the entire stack end-to-end: React/TypeScript frontend, Node.js/Express APIs, DynamoDB data layer (18,000+ records), and real-time WebSocket sync for 40+ concurrent users.
- Designed reusable service abstractions enabling rapid third-party integration (Slack, PandaDoc, Google APIs) and long-term extensibility across the platform.
- Automated deal workflows from initiation to signed contract in under 90 seconds; integrated PandaDoc, Slack, and Google APIs into a single orchestrated pipeline.
- Built an AI-powered conversational agent and strategy recommendation engine using tool calling and prompt caching, reducing API costs by 90%.
- Integrated with ClickUp's enterprise API to automate task deployment, workspace auditing, and service delivery tracking across 1,200+ client folders.
- Architected semantic deal versioning, role-based notification routing, in-memory search indexing (sub-100ms), and centralized configuration management as reusable platform primitives.
- Led cross-org data migration: 27,000+ user ID remappings across 14,000+ records, OAuth migration, and identity matching across workspaces at acquisition.

Owner / Operator — Lightspeed Delivery, LLC | Hamburg, MI
January 2010 – March 2023

- Founded and operated a freight expediting business for 13 years; built custom quoting, pricing, and dispatch automation tooling in Python and JavaScript.
- Self-directed engineering in a production business context — instilled the fast-iteration, high-accountability mindset that defines my engineering approach today.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES6+), React, Node.js, Python

AI & Agents: Anthropic Claude (tool calling, prompt caching), OpenAI, AI agent architecture & orchestration

Infrastructure & Backend: AWS (EC2, S3), DynamoDB, WebSockets, REST APIs, Event-Driven Architecture, PM2, Apache2

Architecture: System Design, Distributed Systems, API Design, Caching Strategies, Real-Time Data Systems

Integrations & Tooling: Slack, ClickUp, PandaDoc, Google APIs, MUI, React Query, Git, ESLint

EDUCATION

Washtenaw Community College — Computer Engineering

2006 – 2008
